

Michelle Price

Graduate Institution: University of Michigan

Location: Ann Arbor, MI

Graduate Discipline: Applied Physics

Hometown: Zimmerman, MN

Research Interests:

I am interested in scalable solar energy conversion. My particular focus is on the role of organic materials in heterojunctions to inorganic semiconductors.

About me:

I matriculated to the University of Michigan Applied Physics Program in the fall of 2008 and soon afterward joined the Maldonado Group to study light-harvesting materials and devices. I participate regularly in outreach programs both through my local Women In Science and Engineering chapter and through independent Maldonado Group initiatives. In 2008 I was honored with both a Regents' Fellowship and a Rackham Merit Fellowship, and accepted the Graham Doctoral Fellowship in January 2010. One of my personal interests involves the communication between scientists and policy makers on issues in sustainable energy, and I plan to contribute to enhancing the feedback between these two communities throughout my scientific career.
