

Rebecca Ann Krall

Graduate Institution: Harvard University

Graduate Discipline: High Energy Physics

Hometown: Kissimmee, FL

Relevant SC Research: High Energy Physics

Research Interest:

In general, I am interested in fundamental particles and their interactions. I am particularly interested in theories of quantum gravity.

About Me:

After completing my undergraduate degree, I spent a year at the University of Cambridge under a Churchill Scholarship. In the fall, I will begin studying toward a Ph.D. at Harvard, where I will work on the ATLAS experiment at the Large Hadron Collider. Upon obtaining my Ph.D., I

plan to do post-doctoral research, and pursue a career either in academia or at a national lab. My hobbies include traveling internationally, attending the theater, playing the piano, and learning languages. I am most experienced in French, and am currently improving my Italian and Norwegian.
